Important Information about Ball Valves

- ⦿ FITOK ball valves are designed to be used in fully open or fully closed position.
- ⦿ Packing adjustment may be required during the service life of the valve (except for BF, BFH and BU series).
- ⦿ For better quality maintenance, FITOK ball valves should be kept in fully open position in warehouse.
- ⦿ Valves that have not been actuated for a period of time may have a higher initial actuation torque.

Special Application Ball Valves

Low-Temperature Service

BF and BFH series ball valves for low-temperature service, with a temperature rating of -40°F to 200°F (-40°C to 93°C), are available.

Low-temperature service valves have low-temperature NBR O-rings. All other materials are the same as those of standard valves. To order a valve for low-temperature service, add -LT into the valve ordering number.

For example: BFSS-FL4-P-LT

BFSS-FL4-P-3-LT

Seal kit for field replacement is available, see "Seal Kits" on Page B-09.

Note: The maximum working pressure for BFH series low-temperature service ball valves is the same as that of standard ball valves.

"Fast Fill" CNG Filling Station Application

BF series 3-way valves for use in "fast-fill" CNG filling station as well as a variety of filling station applications are available.

Features

- A directional installation with 90 degree actuation for ease of operation during filling
 - 3-way design with vent port for ease of venting after fill
 - PEEK seats to reduce maintenance required in high-cycle applications
 - Cycle life test report available upon request
 - Field repairable with seal kit, see "Seal Kits" on Page B-09
- To order, the flow pattern designator should be specified as "3DL" in the valve ordering number.

Example: BFSS-FNS4-P-3DL (The material and pressure vs. temperature curve are the same with those of BF series standard valves.)
 BFSS-FNS4-P-3DL-LT (The material and pressure vs. temperature curve are the same with those of BF series low-temperature service valves.)

CNG/NGV Application

BF series ball valves with ECE R110 manual valve type approval available.

Classification: Class 0

Temperature rating: -40°F to 248°F (-40°C to 120°C)

Pressure rating: 3770 psig (260 bar)

CNG/NGV application valves have low-temperature FKM O-rings and PEEK seats. All other materials are the same as those of standard valves.

To order a valve for CNG/NGV application, add **-R110** into the valve ordering number.

For example: BFSS-FL4-P-**R110**

BFSS-FL4-P-3-**R110**

Seal kit for field replacement is available, see "Seal Kits" on Page B-09.

Ball Valves for Special Applications

Fire safe applications

- API 607 and ISO 15848-1 certified.
- Patented stem packing design and seat design.
- Working temperature: -40°F to 400°F (-40°C to 204°C).
- Working pressure up to: 1500 psig (103 bar).
- Orifice size: 0.19" (4.8 mm) to 1.25" (31.8 mm).
- Helium leak rate/stem diameter $\leq 1.78 \times 10^{-6}$ std cm³/s.
- To order a fire safe valve, add -IE to the valve ordering number.
- For example: BHSS-FL16-22-IE
- To order a FDA-compliant fire safe valve, add -FDA-IE to the valve ordering number.
- For example: BHSS-FL16-22-FDA-IE

Structure Features

Live-loaded disc spring

Elastic compensation effect

Graphite stem packing

Maintain good sealing performance under fire conditions

PTFE stem packing

Maintain good sealing performance under normal conditions

Metal seal design

Reduce the risk of leakage under fire conditions by reducing the active gap between the spherical surface and the sealing surface

PTFE flange seal

Maintain good sealing performance under normal conditions

PTFE seat

Maintain good sealing performance under normal conditions

Graphite flange seal

Maintain good sealing performance under fire conditions

Anti-static device

Grounding spring to provide anti-static protection

Special bolt construction

Maintain body seal during rapid temperature changes resulting from fire exposure and water quenching

Vented ball

Allow pressure to equalize between the valve body and the upstream port, preventing overpressurization and potential seal blowout under fire conditions

Vent Port Options

Vented Valves

The maximum working pressure for vented valves is 500 psig (34.4 bar).

Straight-pattern Valves

A vent hole in the side of the valve body makes the downstream port vent to atmosphere when the valve is closed.

Angle-pattern and 3-way Valves

A vent hole in the side of the valve body makes the bottom port vent to atmosphere when the valve is closed.

Welded Vent Port Connections

A FITOK tube fitting or a tube stub welded to the vent port is available for stainless steel vented valves.

Process Option

Valves with FOG process are available. FOG refers to FC-02 without lubrication.

To order a valve with FOG process, add -FOG suffix to the valve ordering number, for example: BOSS-FL4-05-FOG.

The pressure rating of valves with FOG process: 200 psig (13.8 bar) for orifice 10, 500 psig (34.4 bar) for other orifice.

The starting torque of valves with FOG process is greater than that of the lubricated valves.

Bottom Screw Panel Mounting Options

Mounting Dimensions

The bottom screw panel mounting options are not available on angle-pattern valves, 3-way valves, 6-way valves and 7-way valves.

Locking Device

- Locking Device 1 can lock BP series 2-way or 3-way valves, locking hole diameter is 0.23 in (6.0 mm);
- To order a ball valve with locking device 1, add -L to the valve ordering number.
Example: BPSS-FL4-10-L/BPSS-FL4-10-3S-L/BPSS-FL4-10-3-L
- Locking Device 2 can lock BP series 2-way or 3-way valves, locking hole diameters of valves with orifice 10 or 13 are 0.23 in (6.0 mm);
- To order a ball valve with locking device 2, add -LK to the valve ordering number.
Example: BPSS-FL4-10-LK/BPSS-FL4-10-3S-LK

Pressure vs. Temperature

316 SS Body

Brass Body

Note: The working pressure of valves is restricted by materials of the valve body and seat, as well as end connections. When choosing a valve for your applications, please refer to the above Temperature vs. Pressure Curves and the pressure rating in the dimension table. The minimum value shall be the pressure rating of the valve.
